

THE CONTROL GROUP

benign
normal use — not an attack.
the thing a defense must NOT flag.

ATTACKS ON THE MODEL ITSELF — through the prompt, the text channel

direct_injection
override the model's
INSTRUCTIONS

role_hijack
override the model's
IDENTITY

system_extraction
steal the model's
INSTRUCTIONS

A MODIFIER ON ANY ATTACK — how it's delivered, not what it does

obfuscation
hide the payload so a literal filter can't see it

ATTACKS ON WHAT THE MODEL TOUCHES — the action & data channels

tool_abuse
make the model call
a tool it shouldn't

indirect_injection
deliver the attack through
DATA, not the chat
